

PASSWORD SYNCHRONIZATION MANAGER (PSM)

EXPERIENCE THE POWER OF ONE PASSWORD. IF YOU CONDUCTED AN ANONYMOUS END USER SURVEY, HOW MANY PEOPLE WOULD TELL YOU THAT THEY USE SOME TYPE OF “IMPROVISED PASSWORD REMINDER,” I.E., HIDDEN STICKY NOTES, TO HELP THEM KEEP TRACK OF THEIR SYSTEM AND APPLICATION PASSWORDS? SCARY TO THINK OF, ISN'T IT?

You are in control of your data security. You've got a state-of-the-art access control system for your facility; no one gets in without proper authorization. You've invested in secure data storage so that your data doesn't fall into the wrong hands. You've done everything possible to protect the data of your organization. But what about those sticky notes?

Those types of things are precisely why you need to provide your end users with all possible advanced resources you have at your disposal to help them manage their access to systems and applications. Password Synchronization Manager (PSM) from Tools4ever lets you maintain data security while enabling end-users to use a single password for every system or application. When end-users reset their passwords, PSM ensures that all the connected systems and applications receive the new password and apply it. End-users only need to remember a single password to gain access to the various systems and applications they use daily. It doesn't get much simpler than that.

Best of all, PSM is totally transparent to your end-users. After they have changed their password, PSM ensures that they can log in directly to all the required systems and applications. Their productivity improves and the number of password-related helpdesk calls is minimized, so everyone benefits from PSM.

SEE IMMEDIATE IMPROVEMENTS WITH PSM

PSM is a simple solution that requires minimal resources to implement, so you can immediately begin:

- ▶ Increasing end user convenience
Eliminating the need for end-users to remember multiple passwords
- ▶ Improving productivity
Providing end users with continuous access to their critical applications so they can be more productive
- ▶ Realizing greater cost efficiencies
Experiencing substantial reductions in helpdesk calls as end users no longer have to keep resetting their passwords and forget their passwords
- ▶ Enhancing data security
Eliminating multiple sets of user credentials and reducing the risk of passwords being compromised

THE MORE PASSWORDS YOUR END USERS HAVE...

- THE MORE OPPORTUNITIES FOR SECURITY ISSUES
- THE MORE HEADACHES
- THE MORE SUPPORT ISSUES/HELPDESK TICKETS
- THE MORE UNHAPPY END USERS WILL BE
